DESALINATION

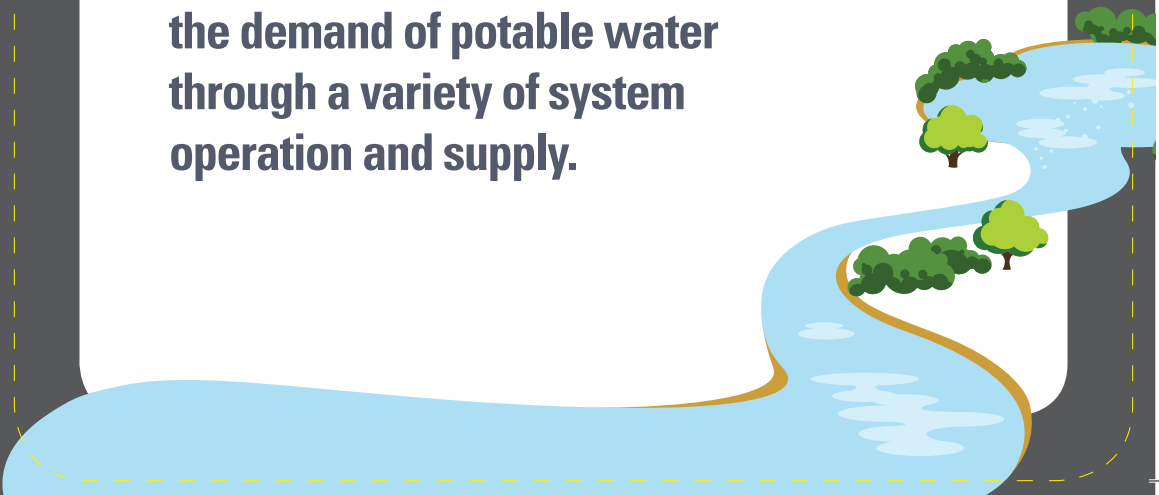

A technology that separates dissolved salts and other minerals from seawater to provide clean, fresh drinking water.

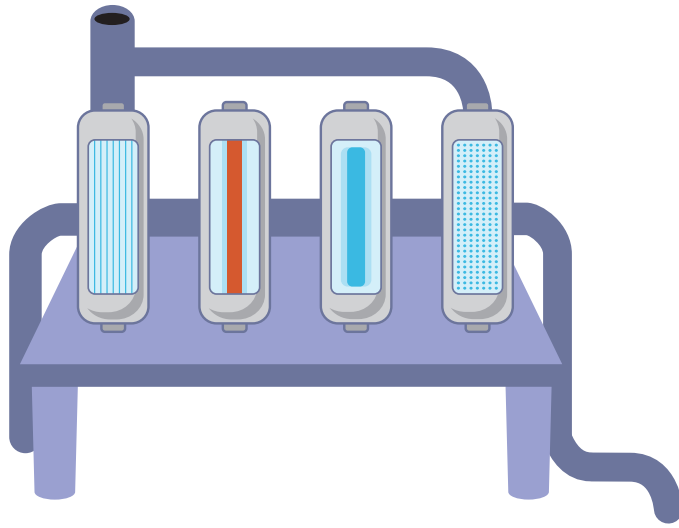

DEMAND MANAGEMENT

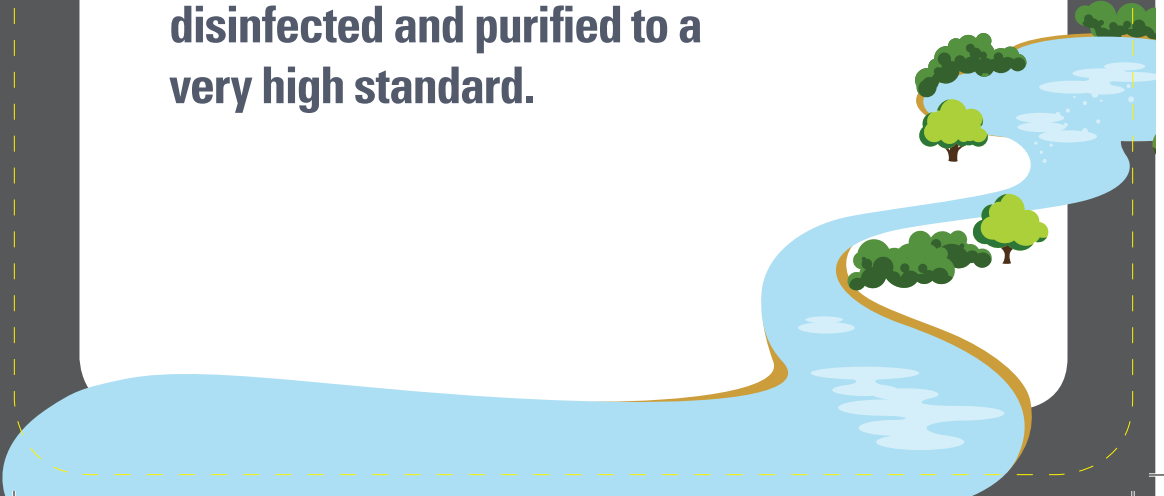

The action of actively managing the demand of potable water through a variety of system operation and supply.

PURIFIED RECYCLED WATER

**Water that has been filtered,
disinfected and purified to a
very high standard.**

DAMS

An artificial barrier constructed across a river valley to form a lake for water storage. Any surplus water flows over the dam spillway and down the creek or river.
